## **DETAILED ACTION**

### ***Specification***

1. The abstract of the disclosure is objected to because it does not contain enough information to describe the claimed invention. Correction is required.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schwebel (U. S. Patent No. 6,270,473) in view of Willis et al. (U.S. Patent 6,406,455).

Schwebel teaches a needleless (i.e. jet injector) injection device integrally formed (see Fig. 1) comprising an injector having a first cavity and an orifice (see Fig. 1-4). The injection device includes a movable member in the first cavity (see Fig. 3) and a charge (12) electrically conductive member at least partially extending across the charge. The apparatus also includes a trigger assembly (5) for igniting the charge. Schwebel teaches an ampoule containing a propellant. Schwebel failed to teach an ampoule having at least two layers of materials (i.e. two discrete materials). Willis et al. teach an ampoule having two layers of materials e.g. one propellant and one passive decay material (2) (see Fig. 1). It would have been obvious to one having ordinary skills in the art at the time the invention was made to modify the teachings of Schwebel and

Art Unit: 3752

combine with Willis et al. to have an injector having an ampoule with two layers of materials for injection.

### ***Response to Arguments***

3. Applicant's arguments filed March 08, 2004 have been fully considered but they are not persuasive. Schwebel and Willis have all the features of the invention (as mentioned above). Willis teaches an ampoule and/or a charge with two discrete materials. Willis does not mention two discrete materials with different combustion characteristics; however, it is obvious that any two different materials will have different combustion characteristics e.g. oil and gasoline.

Applicant's arguments have been addressed in the above paragraphs.

### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3752

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
